protein - protein database search, using Smith-Waterman algorithm MPsrch\_pp Run on:

Thu Oct 21 15:43:59 1999; MasPar time 1.51 Seconds 77.431 Million cell updates/sec

Tabular output not generated

(1-10) from US09040485.pep 67 >US-09-040-485-8

1 DGPTGEPQQE 10 Description: Perfect Score: Sequence:

PAM 150 Gap 15 Scoring table:

119857 segs, 11713122 residues Searched:

Post-processing: Minimum Match 0% Listing first 45 summaries

Database:

a-issued 1:5A\_COMB 2:5B\_COMB 3:PCT9\_COMB 4:backfiles1

Mean 14.038; Variance 40.705; scale 0.345 Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 2, Application US/08479403
Patent No. 5869039
GENERAL INFORMATION:
APPLICANT: MANDEL, Jean-Louis
APPLICANT: AUBOUNG, Patrick
APPLICANT: AUSCE, Jean
APPLICANT: SANDE, Claude
TITLE OF INVENTION: X-LINKED ADRENOLEUKODYSTROPHY GENE AND
TITLE OF INVENTION: CORRESPONDING PROTEIN
NUMBER OF SEQUENCES: 23
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 2, Application US/08136277

                                Sequence 2, Application US/08363586
Patent No. 5629161
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Mueller, Martin
APPLICANT: Gissmann, Lutz
TITLE OF INVENTION: Use of HPV-16 E6 and E7-Gene Derived
TITLE OF INVENTION: Peptides for the Diagnostic Purpose
NUMBER OF SEQUENCES: 4
CORRESPONDENCE ADDRESS:
ADDRESSEE: Punner
ADDRESSEE: Dunner
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 12, Application US/08034245
Patent No. 5504197
GENERAL INFORMATION:
APPLICANT: Schubert, David
APPLICANT: Fisher, Wolfgang H.
TITLE OF INVENTION: NEUROTROPHIC GROWTH FACTOR AND METHODS
TITLE OF INVENTION: OF TREATMENT
NUMBER OF SEQUENCES: 14
CORRESPONDENCE ADDRESS:
ADDRESSEE: Pretty, Schroeder, Brueggemann & Clark
STREET: 444 South Flower Street, Suite 2000
                                                                                                                                                                                                                                                                                                                                                                                    ö

THERE IS LABORATORY EVIDENCE OF ADDRESSAL OF STRUCTION. AND CORTICAL BLINDNESS. THERE IS LABORATORY EVIDENCE OF ADRENAL CORTICAL DISFUNCTION. DEATH INVARIABLY OCCURS IN 1 TO 5 YEARS. DIFFERENT CLINICAL MANIFESTATIONS EXIST LIKE: CEREBRAL CHILDHOOD ALD (CALD), ADRENOMYELONEUROPATHY (AMN) AND "ADDISON DISEASE OLY" (ADO) PHENOTYPE.

SIMILARITY: BELONGS TO THE APP-BINDING TRANSPORT PROTEIN FAMILY (ABC TRANSPORTERS). BELONGS TO THE MDR SUBFAMILY.

Mean 20.498; Variance 23.611; scale 0.868 Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

e.g. in vaccines, for preventing infestation by haematophagous ectoparasites, particularly on cats and dogs croparasites, particularly on cats and dogs close 204-205; 230pp; English and dogs againes a flea seterase protein of the invention. This sequence represents a flea seterase protein of the invention. When administered to animals, the protein induces a protective immune (antibody) response against carboxylesterase (CE), so they, or compositions containing CE proteins, are used, therapeutically cats and dogs, against hematophagous ectoparasite infestation (HED), specifically fleas. More generally the compositions can be used to treat arthropods generally, including pests of agricultural crops, trees, storacd goods etc., also those that are vectors of disease. Fragments of the DNA can be used as probes and primers for identification or production of nucleic acid. Antibodies against the protein can be used for protein and to target cytotoxic compounds to HEP. The compounds containing CE are effective against both adult and larval stages; they carget CEs, including juvenile hormone, that are involved in development, anget CES, including juvenile hormone, that are involved in development, 73-SEP-1998 (first entry)
C. felis esterase protein.
Esterase; flea; protective immune response; carboxylesterase; arthropod; haematophagous ectoparasite infestation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ŏ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Narably way. We are a very liesterase(s) from fleas - useful, e.g. in vaccines, for preventing infestation by haematophagous e.g. in vaccines, for preventing infestation by haematophagous ectoparasites, particularly on cats and dogs claim 1; Page 137-140; 230pp; English.

This sequence is the flea esterase protein, nfE71710, of the invention. When administered to animals, the protein induces a protective immune when administered to animals, the protein induces a protective immune compositions containing CE proteins, are used, therapeutically or as vaccines, to protect particularly mammals and birds, specifically cats and dogs, against haematophagous ectoparasite infestation (HEP), capecifically fleas. More generally the compositions can be used to treat arthropods generally, including pests of agricultural crops, trees, stored goods etc., also those that are vectors of disease. Fragments of the production of nucleic as probes and primers for identification or production of nucleic and against the protein can be used for passive immunisation; to screen expression libraries; to isolate the protein and to target cytotoxic compounds to the protein and the composition of protein and primers for the protein can be used to protein and to target cytotoxic compounds the protein and the composition of protein and to target cytotoxic components.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      containing CE are effective against both adult and larval stages; they target CEs, including juvenile hormone, that are involved in development,
                                                                                                                                                                                                                                                                                                                            23-SEP-1998 (first entry)
C. felis esterase, nFF71710.
Esterase; flea; protective immune response; carboxylesterase; arthropod; haematophagous ectoparasite infestation; nFF71710.
Ctenocephalides felis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               W57878;
23-SED-1998 (first entry)
C. felis esterase protein.
Esterase; flea; protective immune response; carboxylesterase; arthropod; haematophagous ectoparasite infestation.
Ctenocephalides felis.

New nucleic acid encoding carboxyl:esterase(s) from fleas - useful,
e-g. in vaccines, for preventing infestation by haematophagous
ectoparasites, particularly on cats and dogs

When administered to animals, the protein induces a protective immune cantibody) response against carboxylesterase (CE), so they, or compositions containing CE proteins, are used, therapeutically cats vaccines, to protect particularly mammals and birds, specifically cats and dogs, against haematophagous ectoparasite infestation (HEP), specifically fleas. More generally the compositions can be used to treat arthropods generally, including pests of agricultural crops, trees, stored goods etc., also those that are vectors of disease. Fragments of the DNA can be used as probes and primers for identification or production of nucleic acid. Antibodies against the protein can be used for passive immunisation; to screen expression libraries; to isolate the protein and to target cytotoxic compounds to HEP. The compounds containing CE are effective against both adult and larval stages; they transcribed in development, metamorphosis, feeding, digestion and reproduction. Narsubi valvia.

E.g. in vaccines, for preventing infestation by haematophagous econtaining the protein induces a protective immune canninistered to animals, the protein induces a protective immune canninistered to animals, the protein induces a protective immune cannositions containing the protein, are used, therapeutically or as vaccines, to protect particularly mammals and birds, specifically or as and dogs, against hematophagous ectoparasite infestation (HEP).

Compositions containing the protein induces a protectically cats and dogs, against hematophagous ectoparasite infestation (HEP).

Compositions also those that are vectors of disease. Fragments of arthropods generally, including pests of agricultural crops, trees, also those that are vectors of disease. Fragments of the DNA can be used as probes and primers for identification or production of nucleic acid. Antibodies against the protein can be used for passive immunisation; to screen expression libraries; to isolate the protein and to target cytotoxic compounds to HEP. The compounds containing CE are effective against both adult and larval stages; they target CEs, including juvenile hormone, that are involved in development, Esterase, flea, protective immune response, carboxylesterase, arthropod; haematophagous ectoparasite infestation; nfE81710. New nucleic acid encoding carboxyl:esterase(s) from fleas - useful,

e.g. in vaccines, for preventing infestation by haematophagous

PT e-g. in vaccines, particularly on cats and dogs

Claim 2: Page 178-180: 230pp; English.

CR This sequence represents a flea esterase protein of the invention.

CR When administered to animals, the protein induces a protective immune

CR Ministered to animals, the protein of the invention.

CR When administered to animals, the protein of the invention.

CR Ministered to animals, the protein of the invention.

CR Ministered to animals, the protein of the invention.

CR Ministered to animals, the protein of the invention.

CR Ministered animals carboxylesterase (CE), so they, or as and dogs, against haematophagous ectoparasite infestation (HEP),

CR and dogs, against haematophagous ectoparasite infestation (HEP),

CR and dogs, against haematophagous ectoparasite infestation of selective and primers for identification or

CR arthropods generally, including pests of agricultural crops, trees,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New nucleic acid encoding carboxyl:esterase(s) from fleas - useful, e.g. in vaccines, for preventing infestation by haematophagous ectoparasites, particularly on cats and dogs Claim 1; page 155-158, 230pp; English.

This sequence is the flea esterase protein, nfE81785, of the invention. When administered to animals, the protein induces a protective immune (antibody) response against carboxylesterase (CE), so they, or compositions containing CE proteins, are used, therapeutically or as vaccines, to protect particularly mammals and birds; specifically cats and dogs, against haematophagous ectoparasite infestation (HEP),

e.g. in vaccines, for preventing infestation by haematophagous ectoparasites, particularly on cats and dogs claim 2; Page 145-148; 230pp; English.

This sequence is the flea esterase protein, nfE82801, of the invention. When administered to animals, the protein induces a protective immune (antibody) response against carboxylesterase (CB), so they, or compositions containing CE proteins, are used, therapeutically cats vaccines, to protect particularly mammals and birds, specifically cats and dogs, against haematophagous ectoparasite infestation (HEP), appecifically fleas. More generally the compositions can be used to treat arthropods generally, including pests of agricultural crops, trees, stored goods etc., also those that are vectors of disease. Fragments of the bused as probes and primers for identification or production of nucleic acid. Antibodies against the protein can be used for passive immunisation; to screen expression libraries; to isolate the protein and to target cytotoxic compounds and the procession compounds the compounds the compounds and the compounds of the compounds to HEP. The compounds the compoun
                     arthropods generally, including pests of agricultural crops, trees, stored goods etc., also those that are vectors of disease. Fragments of production of nucleic acid. Antibodies against the protein of nucleic acid. Antibodies against the protein on production of nucleic acid. Antibodies against the protein on production of nucleic acid. Antibodies against the protein on protein and to target cytotoxic compounds to HEP. The compounds containing CE are effective against both adult and larval stages; they target CES, including juvenile hormone, that are involved in development, metamorphosis, feeding, digestion and reproduction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     containing CE are effective against both adult and larval stages; they target CEs, including juvenile hormone, that are involved in development,

This sequence is the flea esterase protein, nfE71788, of the invention. This sequence is the flea esterase protein induces a protective immune community of animals, the protein induces a protective immune compositions containing CE proteins, are used, therapeutically or as another of protect particularly manmals and birds, specifically dats and dogs, against haematophagous ectoparasite infestation (HEP), specifically fleas. More generally, the compositions can be used to treat arthropods generally, including pests of agricultural crops, trees, stored goods etc., also those that are vectors of disease. Fragments of the DNA can be used as probes and priners for identification or protein and to target cation, to screen expression libraries; to isolate the protein and to target cytofoxic compounds to HEP. The compounds containing CE are effective against both adult and larval stages; they target CEs, including juvenile hormone, that are involved in development, metamorphosis, feeding, digestion and reproduction.

```
for passive immunisation; to screen expression libraries; to isolate the protein and to target cytotoxic compounds to HEP. The compounds containing CE are effective against both adult and larval stages; they target CEs, including juvenile hormone, that are involved in development, metamorphosis, feeding, digestion and reproduction. Sequence 596 AA,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The sequence of a novel protein containing agarase activity from Vibrio species. The gene of 3205 bp encodes a protein of 995 amino acids. The gene was obtained by PCR amplification from a Vibrio genomic library using primers and probes based on the amino acid sequence (R60813-21) from protein sequencing of partially degraded agarase 0107. The gene was then introduced into E.coli JM83. The expressed protein could then be recovered by cation-exchange chromatography. The protein

DNA and protein sequences for recombinant syndecan-derived proteoglycans - comprising a core protein having glycosylation aries for heparin sulphate glycosaminoglycan side chains.

To sites for heparin sulphate glycosaminoglycan side chains.

Claim 15; Page 82; 97pp; English.

Claim 15; Page 82; 97pp; English.

Peptides R66797-802 correspond to varying length fragments of the mature mouse syndecan-1 (see R66793 and R66795). The sequence of the mature mouse syndecan-1 (see R66793) and mature protein sequence. The fragments are portions of the extracellular candomain and contain a heparan sulphate glycosaminoglycan attachment site (R66795). The functional domains, esp. the soluble extracellular or heparan binding site, of the syndecan molecules (see R6797-812 and R66818) can be used to construct chimaeras by linking them to biological effector molecules, cell surface receptors, drugs, antibodies, diagnostic agents or components of microorganisms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                sites for heparin sulphate glycosaminoglycan side chains.
Claim 15; Page 82; 97pp; English.
Peptides R66797-802 correspond to varying length fragments of the
N-terminal sequence of the mature mouse syndecan-1 (see R66793 and
R66786). The sequence given here covers the amino acids from 1-84 of the
mature protein sequence. The fragments are portions of the extracellular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      mature protein sequence. The fragments are portions of the extracellular domain of the protein and contain a heparam sulphate glycosaminoglycan attachment site (R66795). The functional domains, esp. the soluble extracellular or heparam binding site, of the syndecan molecules (see R66797-812 and R66818) can be used to construct chimaeras by linking them to biological effector molecules, cell surface receptors, drugs, antibodies, diagnostic agents or components of microorganisms.
   11-SEP-1995 (first entry)
N'terminal fragment (a.a. 1-84) of mature mouse syndecan-1.
Cell surface; proteoglycan; syndecan; mouse; mammary; epithelial cell; ectodomain; NMuMG; glycosylation; heparan sulphate; chondroitin sulphate; glycosaminoglycan; chimaera; chimaeric molecule; effector molecule;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     N-terminal fragment (a.a. 1-154) of mature mouse syndecan-1. Cell surface; proteoglycan; syndecan; mouse; mammary; epithelial cell; ectodomain; NMuMG; glycosylation; heparan sulphate; chondroitin sulphate; glycosaminoglycan; chimaera; chimaeric molecule; effector molecule; receptor; drug; antibody; diagnostic agent.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Vaccine to prevent and treat infection

Claim 3; Page 32; 41pp; English.

This amino acid sequence is a cytocoxic Epstein-Barr virus (EBV) T-cell
epitope of the EBV nuclear antigen 3A (EBNA3A), which binds the human
leukocyte antigen acceptor All (HLA All). It is used to prepare a
vaccine which may include the cytotoxic EBV T-cell epitope (W40828-
W40846), or a nucleic acid sequence encoding it. The vaccine produced
comprises or encode at least one antigen (W40847W40876) to which the
individual will mount an anamestic response, e.g. a tetanus toxoid,
diphtheria toxoid, Bordetella pertussis antigen, poliovirus antigen,
purified protein derivative, glycoprotein 350 protein, and/or helper
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        09-JUN-1998 (first entry)
Cytotoxic Epstein-Barr T-cell epitope 37.
Cytotoxic Epstein-Barr T-cell epitope 37.
Herpes simplex virus type 4; Epstein-Barr virus; EBV; cytotoxic;
T-cell epitope; nuclear antigen; human leukocyte antigen; HLA; vaccine; tetanus toxoid; diphtheria toxoid; Bordetella pertussis;
                                                                                                                                                         Claim 4: Page 7-9; 11pp; Japanese.

The sequences given in W06490-91 represent two clones of murine beta-1,4-galactosyltransferase-related proteins. These proteins can be used as diagnostic agents for various diseases. They are esp. useful in the diagnosts of sterility and in the aiding and inhibiting of fertilisation. The CDNA's encoding the two beta-1,4-galactosyltransferase related proteins were isolated from F9 cancer cells according to Huynh's method.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

DNA and protein sequences for recombinant syndecan-derived

Proteoglycans - comprising a core protein having glycosylation

Fites for heparin sulphate glycosaminoglycan side chains.

Claim 15: Page 82; 97pp; English.

Claim 15: Page 82; 97pp; English.

Creptides R66797-802 correspond to varying length fragments of the

CR Feptides R66797-802 correspond to varying length fragments of the

CR Fortians sequence of the mature mouse syndecan: (see R66793 and

CR F6796). The sequence given here covers the amino acids from 1:188 of the

CR CATACOMENT of the protein and contain a heparan sulphate glycosaminoglycan

CR CATACOMENT of the protein and contain a heparan sulphate glycosaminoglycan

CR CATACOMENT of the protein and contain a heparan sulphate glycosaminoglycan

CR CATACOMENT of the syndecan molecules (see

CR F6779-812 and R6618) can be used to construct chimaeras by linking them

CR CATACOMENT of diagnostic agents or components of microorganisms.
                                                                                                                                                                                                                                                             11-SEP-1995 (first entry)
N-terminal fragment (a.a. 1-188) of mature mouse syndecan-1.
Cell arces proteoglycan; syndecan; mouse; mammary; epithelial cell; ectodomain; NMUMG; glycosylation; heparan sulphate; chondroitin sulphate; glycosaminoglycan; chimaera; chimaeric molecule; effector molecule; Mus musculus.

Moyosous antibody; diagnostic agent.
